DETAILED ACTION

1. This communication is issued as a supplemental office action in order to correct certain errors in the previous notice of allowance mailed 7/28/06. In particular, indication of allowed claims has been corrected.

Response to Amendment

2. Claims 1-3,6,8,11,15,17 and 18 have been amended per request. Claims 1-12, 14,15 and 17-20 have been allowed.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance:

The claimed inventions pertain to valuation of assets and, more particularly, to valuing real property, including land and buildings, using the information and communication resources of an on-line computing environment, such as the global Internet.

The following prior art references have been deemed most relevant to the allowed claim(s):

Sklartz (US PGPUB 2002/0087389) teaches a method and system for providing valuation of a home wherein a server software collects real estate, and real estate related, data from various sources, adjusts and filters the data, processes that data using trend, comparable market analysis, buy/sell signal, and appraisal engines, responds to user inputs, and provides information outputs and trend, comparable market analysis, buy/sell signal, and appraisal decision tools to users.

Hough (US Patent 5414621) discloses a system and method for determining comparative values of comparable properties based on assessment percentages and sales data of the comparable properties to ultimately determine a value for a subject property.

Bradley et al. (US 6842738) teaches a system which preprocesses property value estimates based on stored property data. It stores the computed property value estimates in a

Art Unit: 3693

forecast data repository. The system obtains updates or new property data and computes new estimates according to a predetermined schedule. Users can instantaneously obtain property value estimates that have been preprocessed, thus eliminating a long wait period necessary for on-line processing.

Claims 1-12, 14, 15 and 17-20: The closest prior art of record discussed above fails to teach or suggest a method or corresponding system for determining a real estate property in an on-line computing environment having at least the following distinguishing features (refers to all pending claims):

each of a plurality of client computers coupled to a distributed computer network represents at least one entity that is different from another of one of client computers such that each different entity performs a different role in an evaluation of a selected real estate property,

each of the client computers is operable to access a valuation program module operating on a property management services server to input predetermined information about the selected real estate property in accordance with the role of the entity represented by the corresponding client computer, and

the valuation module in response to receiving the input predetermined information about the selected real estate property from at least two of the plurality of the client computers in accordance with the role of the entity represented by the corresponding client computers, calculates valuation for the real estate property based on the input predetermined information and comparable data relevant to the selected real estate property.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the

Art Unit: 3693

issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

SHIMAZU, EP 1220125 A2 Virtual real estate dealing method, server and terminal used therefor. Note that this reference is published after the priority date of the instant application but only cited to show state of the foreign patent references.
